

Product Advisory

This Product Advisory applies to PA PowerStation users only.

There is an Interact Application Manager update that needs to be installed on your development system in order to transfer and run applications on a PA PowerStation.

Update your development system with these changes prior to downloading your project to your Runtime workstation.

The Interact Application Manager update is available from the CTC Support website. Follow the steps below to download the update from the Support website and install it on your development and Runtime workstations.

1. Go to the following website:
www.ctcusa.com
2. Click **Support** then select **Click to Enter the CTC Forum**.
The Support Forum Login screen displays.
3. Enter your Login information then select **Interact - Version Updates**.
4. Select the link **AM_613_PA_PowerStation_Update**.
5. Download the WinZip file.
6. Run the WinZip file, extracting the compressed files.
7. Copy the extracted files into the location where your Interact program files exist on your development workstation. Using the default program location, this would be:
C:\MachShop\Interact\AM
8. Download your application to the Runtime Workstation.
The Runtime Workstation will be updated to include this latest upgrade to the Application Manager.
